

132708. HIPPEASTRUM RETICULATUM var. STRIATIFOLIUM (Herbert) Baker.
Amaryllidaceae.

A variety with leaves broader than those of the type and with white keels.

132709. HIPPEASTRUM RUTILUM (Edwards) Herbert.

A hippeastrum with small bulbs, 2 to 3 inches in diameter, and bright-green leaves 1 foot long and over 1 inch wide; the glaucous scape, as long as the leaves, is somewhat compressed and bears 2 to 4 red flowers. Native to Brazil.

For previous introduction see 93160.

132710 to 132719. HYMENOCALLIS spp. Amaryllidaceae.

132710. HYMENOCALLIS LITTORALIS Salisb.

Spiderlily.

132711. HYMENOCALLIS MACROSTEPHANA Baker.

A hymenocallis with 8 or 9 oblanceolate, loosely arcuate leaves 2 to 3 feet long appearing with the much shorter scape which bears an umbel of 6 to 10 fragrant, pure-white flowers. The perianth tube is 3 inches long, green in the lower part. The linear-rotate segments are more than 3 inches long, and the funnel-shaped crown is about 2 inches long and the same diameter as the irregularly toothed throat. Closely allied to *Hymenocallis speciosa* and possibly a hybrid of that species with *H. calathina*.

132712. HYMENOCALLIS ROTATA (Ker) Herbert.

132713. HYMENOCALLIS SENEGAMBICA Kunth and Bouché.

A hymenocallis with sword-shaped, arcuate leaves about 2 feet long and an umbel of 6 to 8 white flowers. The perianth tube is slender, 5 to 6 inches long, the narrow linear segments are about 4 inches long, and the funnel-shaped cup is 1 inch long. An African plant, perhaps introduced from America.

132714. HYMENOCALLIS SPECIOSA (L. f.) Salisb.

A species with dark-green leathery, petiolate, oblanceolate leaves $1\frac{1}{2}$ to 2 feet long and an umbel of 7 to 15 attractive, fragrant white flowers. The perianth tube is greenish, up to 3 inches long, and the segments are nearly as long. Native to the West Indies.

132715. HYMENOCALLIS CALATHINA (Ker) Nichols.

Lilybasket.

A species native to Peru and Bolivia, with 6 to 8 strap-shaped leaves less than 2 feet long and a 2-edged scape about 2 feet high, bearing a sessile umbel of 2 to 5 flowers. The perianth tube, 2 to 4 inches long, is green and enlarged above; the lanceolate segments, as long as the tube, are white, and the corollalike cup is green striped, with rounded fringed lobes.

For previous introduction see 127063.

132716 and 132717. HYMENOCALLIS.

A hybrid of *Hymenocallis calathina* and *H. longipetala*, with pure white flowers. Introduced under the name "festalis," for which a place of publication has not been found.

132716. Typical form.

132717. *Triumph*. A form with very large white flowers.

132718. HYMENOCALLIS HARRISIANA Herbert.

A species, native to Mexico, with 3 to 6 narrowly obovate leaves 1 foot long, a slender glaucous scape shorter than the leaves, and a sessile umbel of 2 to 3 fragrant white flowers. The tube is 3 to 4 inches long, the linear segments are about 3 inches long, and the funnel-shaped cup is plicated and toothed.

For previous introduction see 93164.

132719. HYMENOCALLIS.

Var. *Olympic*.
