

134476 to 134481—Continued

134477. *VACCINIUM GLAUCO-ALBUM* Hook. f.

A shrub, native to the Sikkim Himalayas between 9,000 and 10,000 feet altitude. The leathery, oblong, ovate leaves, 2 to 3 inches long, are mucronate-serrate and are white beneath. The small, pink-tinged, white flowers, in racemes 3 inches long, are subtended by large white bracts which persist until the fruits are ripe.

For previous introduction see 102784.

134478. *VACCINIUM FLORIBUNDUM* H. B. K.

A slender shrub, native to Ecuador between 10,000 and 12,000 feet. It sometimes becomes 6 feet high, with very small elliptic to ovate-acute finely serrate leaves. The edible fruit is roundish, about $\frac{1}{2}$ inch in diameter, glaucous blue, juicy, subacid, and contains several very small seeds. It greatly resembles some of the blueberries of the United States. Received as *Vaccinium mortinia* which is now referred to the above.

For previous introduction see 54281.

134479. *VACCINIUM MOUPINENSE* Franch.

A shrub 2 to 4 feet high with small obovate to oblong-obovate glossy, green leaves and racemes of rose-pink flowers followed by small deep purple or black fruits. Related to *Vaccinium nummularia*. Native to western China.

134480 and 134481. *VACCINIUM PADIFOLIUM* Smith.

A shrub or small tree with ovate to oval leaves 1 to $2\frac{1}{4}$ inches long, dark green above, and racemes of dull-yellow flowers tinged with purple, followed by blueberries $\frac{1}{2}$ or $\frac{1}{2}$ inch across. Native to Madeira.

134480. Received as plants and cuttings.

134481. Received as seeds.

134482 to 134518. *TRITICUM AESTIVUM* L. Poaceae. Common wheat.

From Australia. Seeds presented by H. Wenzholz, Director of Plant Breeding, New South Wales Department of Agriculture, Sydney, New South Wales. Received November 21, 1939.
