

141821 to 141865—Continued

141862. × *EUCALYPTUS TRABUTI* Vilm.

A remarkable hybrid between *Eucalyptus botryoides* Sm. and *E. rostrata* Schlecht., discovered by L. Trabut. The characters of the leaves are intermediate; the capsules could not well be more nearly intermediate. The great value of this hybrid is in its unusually rapid growth.

For previous introduction see 63581.

141863. *EUCALYPTUS UMBRA* R. T. Baker.

A small to moderately large tree, with thick, coarse, fibrous, persistent bark and alternate thick, shining, lanceolate to falcate-lanceolate mature leaves. The timber is inferior. In Australia this tree grows on poor saline flats and ridges in proximity to salt water.

141864. *EUCALYPTUS VIMINALIS* Labill.**Manna gum.**

A graceful Australian tree up to 300 feet high, with rough bark from which exudes the bonelike substance that gives the tree its name of manna gum. The leaves are lanceolate and falcate; the white flowers are in threes and are attractive to bees; and the fruits are flattened globose with sharp-pointed tops. The wood is used only for rough building purposes.
